

# YANMING WAN

sz.wanym@gmail.com | <https://www.wanyanming.com> | +86 188 0013 1838

## Profile

---

- **PhD student interested in Social Reinforcement Learning and Large Language Models.**
- Currently studying in **University of Wahington CSE**, advised by **Prof. Natasha Jaques**.

## Education

---

### University of Washington

Seattle, WA, USA

*PhD Student, Paul G. Allen School of Computer Science & Engineering, Advised by Natasha Jaques*

*Sept. 2023 – present*

- GPA: 3.95/4.00 (Up till Spring Semester, 2025)

### Tsinghua University

Beijing, China

*Undergraduate Student, Yao Class, Institute for Interdisciplinary Information Sciences (IIIS)*

*Aug. 2019 – June 2023*

- **GPA: 3.97/4.00, Rank: 2/30**
- Received **Recognition Prize of Yao Award** *Sept. 2022*
- Received **Jiang-Nanxiang Scholarship** (Unique in Yao Class) *Dec. 2021*
- Won the **Gold Medal** in 2018 Chinese Mathematical Olympiad, and admission guaranteed *Nov. 2018*

## Research Experiences

---

### Google DeepMind

Seattle, WA, USA

*Student Researcher, Hosted by Jiaying Wu*

*Sept. 2024 – March 2025*

- Current LLM training methods like RLHF prioritize helpfulness and safety but fall short in personalization. Traditional methods to personalization often rely on extensive user history, limiting their effectiveness for context-limited users.
- We propose to incorporate an intrinsic motivation to improve the conversational agents' model of the user as an additional reward alongside multi-turn RLHF. This auxiliary reward encourages the agent to actively elicit user traits by optimizing conversations to increase the accuracy of its user model, and consequently the policy agent can deliver more personalized interactions through obtaining more information about the user.

### Social RL Group, University of Washington

Seattle, WA, USA

*Research Assistant and Teacher Assistant, Advised by Natasha Jaques*

*Sept. 2023 – present*

- Variational Preference Learning: To address the need for pluralistic alignment, we propose to infer a novel user-specific latent and learning reward models and policies conditioned on it without additional user-specific data.
- Follow Instructions with Social and Embodied Reasoning: To better natural language instruction in collaborative embodied tasks, we propose to make explicit inferences of human's goals and intentions as intermediate reasoning steps.

### CoCoSci Lab, Massachusetts Institute of Technology

Cambridge, MA, USA

*Undergraduate Visiting Student, Advised by Josh B. Tenenbaum and Jiayuan Mao*

*Feb. 2022 – July 2022*

- To collaborate with human partners successfully in complex environments, robots should be able to interpret and follow natural language instructions in contexts.
- Introduced HandMeThat, a benchmark for a holistic evaluation of instruction understanding and following in physical and social environments, which highlights the additional challenge of understanding instructions with ambiguities based on physical states and human actions and goals.
